

(a) Executable support POSSIBLE

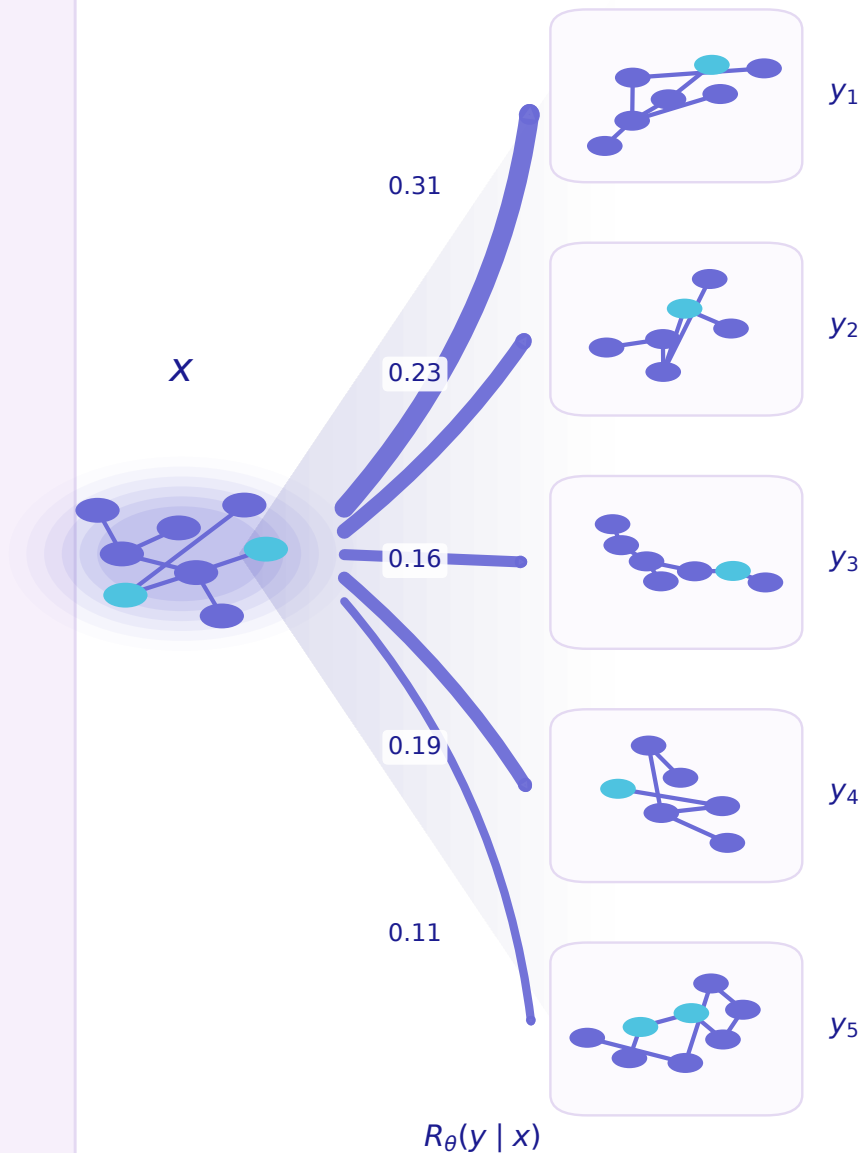

exact executor, state-dependent support

edit marks $\mathcal{A}(x)$ molecular successors $\mathcal{S}(x)$

(b) Learned reference process PLAUSIBLE

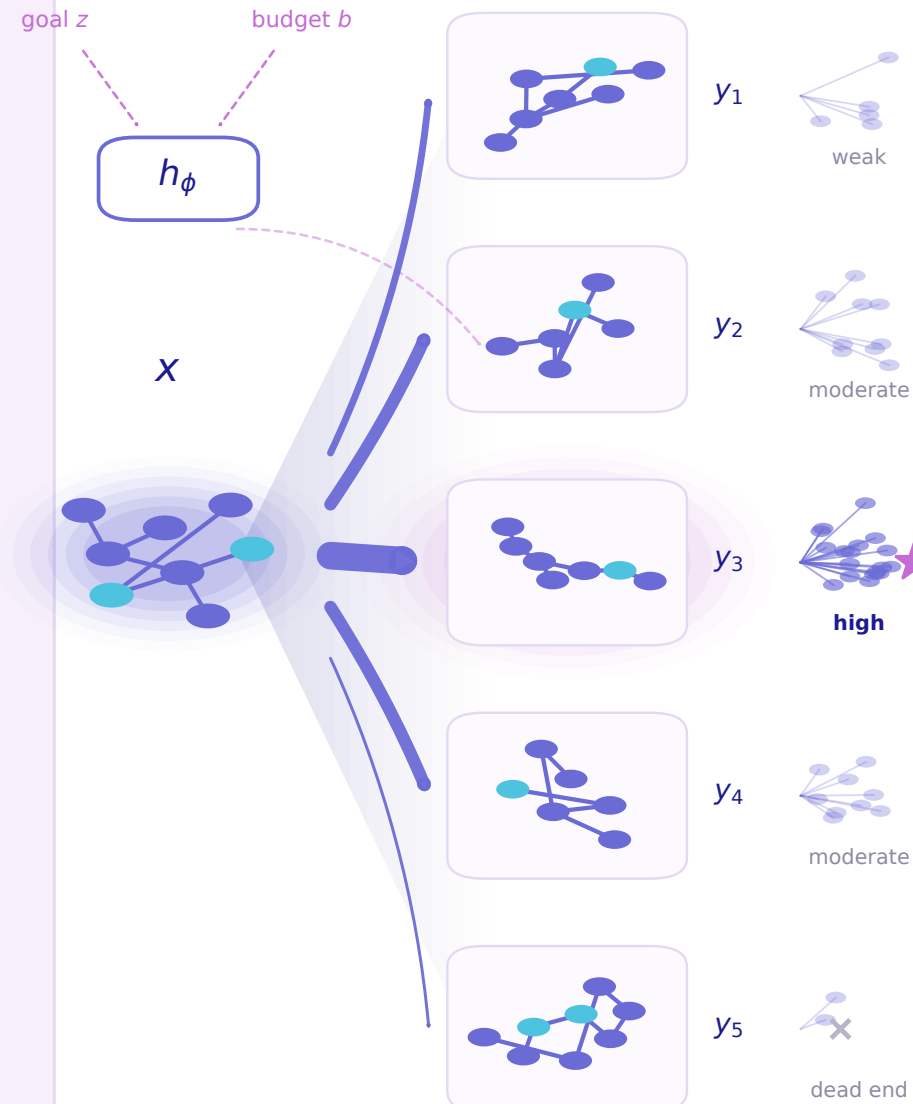

learned, goal-independent

(c) Finite-horizon control PURPOSEFUL

goal- and budget-conditioned

$$P_\phi(y | x, z, b) \propto R_\theta(y | x) h_\phi(y, z, b - 1)$$

reference R_θ (frozen)
control P_ϕ
